TV Studio

Thank you all for your patience as we revamp and reorganize the TV studio. We should be fully staffed and finished with some of our studio upgrades and station adjustments by the end of October. As some of you already know, we have most of the regular music stations back and have added a few more in rotation for the enjoyment of everyone.

HEALTH SERVICES

Get Your Flu Shot

The Centers for Disease Control and Prevention (CDC) recommend everyone six (6) months and older get vaccinated every flu season. It takes about two (2) weeks for protection to develop after vaccination.

There are many flu viruses, and they are always changing. Each year a new flu vaccine is made to protect against the influenza viruses believed to likely cause disease in the upcoming flu season. Even when the vaccine does not exactly match these viruses, it may still provide some protection.

The influenza vaccine does not cause flu. An influenza vaccine may be given at the same time as other vaccines. People with minor illnesses, such as a cold, may be vaccinated. People who are moderately or severely ill should usually wait until they recover before getting an influenza vaccine. Soreness, redness, and swelling where the shot is given; and fever, muscle

aches, and headaches can happen after influenza vaccination.

If you have any questions regarding flu vaccination, please send an AIC communication to Health Services for additional information.

Vacúñese contra la influenza!

Los Centros para el Control y la Prevención de Enfermedades (CDC, por sus siglas en inglés) recomiendan que todas las personas de 6 años de edad y mayores se vacunen cada temporada de influenza. La protección tarda en desarrollarse alrededor de 2 semanas después de la vacunación.

Hay muchos virus de influenza y siempre están cambiando. Cada año se produce una nueva vacuna en contra de los virus de la influenza que se cree son los probables de causar la enfermedad en la siguiente temporada de influenza. Incluso si la vacuna no coincide exactamente con estos virus, esta sí puede ofrecer cierta protección. Las vacunas en contra de la influenza no causan la gripe.

Una vacuna contra la influenza puede administrarse al mismo tiempo que otras vacunas. Las personas con enfermedades menores, como un resfriado, pueden vacunarse. Las personas que están moderada o severamente enfermas normalmente deben esperar hasta su recuperación antes de vacunarse contra la influenza. Dolor, enrojecimiento e inflamación en el sitio en el que se puso la vacuna; y fiebre, dolores musculares y de cabeza pueden presentarse después de la vacuna contra la influenza.

Si tiene alguna pregunta sobre su vacuna contra la influenza, por favor contacte por escrito (kyte) a los Servicios de Salud, para obtener información adicional.
